

# Teflon\* Release Sheets For uPVC Welding

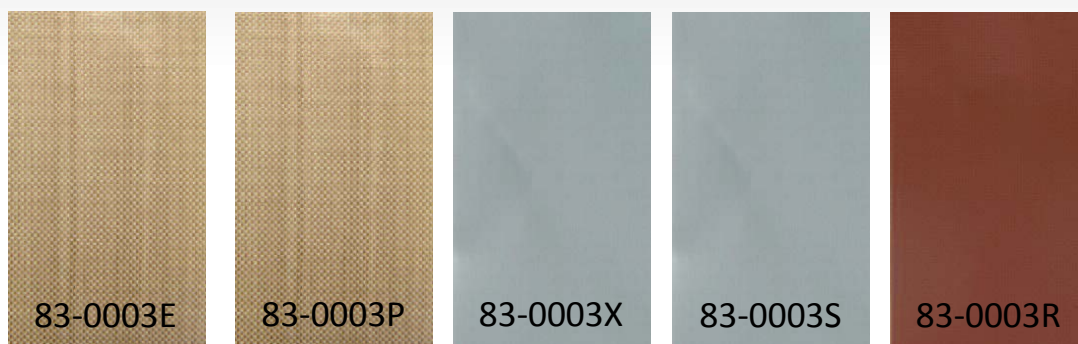

As a UPVC Welder, we know that you need **maximum lifetime** and minimum problems from the **Release sheets** that you use in window welding. In cooperation with The Promac Group who are renowned for world class PVC, flat glass and aluminum machinery, **CHEMFAB®** is delighted to offer you different versions of the Teflon\* (PTFE) release sheets for V, flat and combined welding plates in sleeves and endless sheets.

These products have been developed by CHEMFAB® to provide the **longest lasting** and **most consistent performance** that maximizes your productivity and saves you time and money.

With a long lasting and **non-stick release** surface, high temperature (up to 260°C) and **excellent chemical resistance**, CHEMFAB® products are available in various designs and are suitable for use with all heating systems including **RF and microwave** systems.

**CHEMFAB®**  
Partner for Performance

Promac strives to always go the extra mile in terms of service delivery for customers and the fact we are further bolstering our Service and Spares Department shows our commitment to that.

Whatever your choice of machinery, we can help to keep your welding press clean and operating for longer by preventing a build up of melted PVC on welding plates.

As well as selling spares and consumables directly from their vehicles, the team attend scheduled as well as 'drop in' visits when in your area in order to take customers what they need.
